

Macromedia® Dreamweaver UltraDev 4

Macromedia® Dreamweaver UltraDev 4's interface shares most of the basic elements found in Dreamweaver, including the Launcher, main toolbar, and panels. This course introduces students to the major features of Dreamweaver UltraDev 4 by guiding them through creating database-linked Web pages. This course starts with setting up connections between Web pages and databases and concludes with building server behaviors.

Students will learn to add dynamic data to create custom, on-the-fly pages, build pages that users can change or update within their Web browsers, And create precise and powerful record searches using SQL variables. In addition, students will learn how to set passwords and page-level security with Server Behaviors.

Duration:

- 3 Days, Instructor-led

Prerequisite:

- Course 300: Macromedia® Dreamweaver 4
