

Microsoft® SQL Server™ 7.0 System Administration

This course is designed for database administrators who need to install, administer, and support Microsoft SQL Server 7. The course reviews significant changes in the product from previous versions and provides a task-oriented discussion of all of the important features that SQL Server provides for administrators.

Students will master the procedures for installing, administering, and optimizing SQL Server 7 in an enterprise network.

Duration:

- 5 Days, Instructor-led

Prerequisite:

- Course 100: Relational Database Design and Concepts

Topics Include:

- Overview of SQL Server
- Installation
- Upgrading to SQL Server 7.0
- System Configuration and Architecture
- Database Files
- Transferring Data
- Web Publishing and Full-Text Indexing
- Backing Up and Restoring Databases
- Logins, User Accounts, and User Roles
- Permissions and Security Planning
- Automating Administrative Tasks
- Monitoring and Maintaining SQL Server
- Planning and Setting Up Replication
